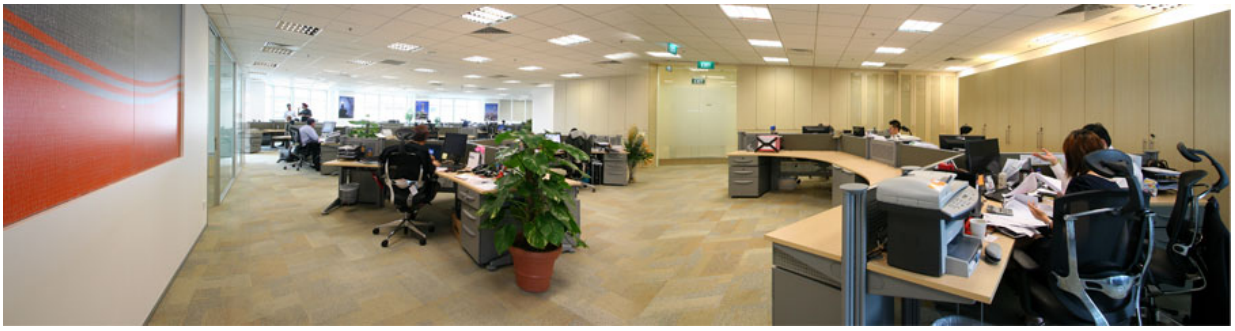
TRIUMPH-DRILLING

TO BE THE PREFERRED PROVIDER OF SOLUTIONS TO YOUR TENDER ASSIST DRILLING NEEDS

About Us



Triumph Drilling is a leading provider of offshore tender assist drilling rigs.

Our fleet is the second largest in the industry and we currently have units operating in Southeast Asia.

TENDER RIGS
A purpose built self-erecting drilling tender barge, the barge is typically moored alongside a platform and contains crew quarters, mud tanks, mud pumps, and power generation systems. The only equipment transferred to the platform for drilling operations is the Drilling Equipment Set ("DES"), which included the drill floor, derrick and other drilling equipment. The self-erecting tender rig is designed as a cost-efficient and flexible drilling system for development scenarios involving multiple well slot fixed platforms whereby the rig moves from platform to platform using its own DES which is lifted onto the oil platform by its own crane.

HIGH QUALITY TENDER RIGS BENEFITING FROM RECENT REFURBISHMENTS
We are committed to constantly upgrading and improving our rig fleet. The upgrades to Triumph 101 and Triumph 109 include the addition of a third mud pump, expanded living quarters, enhanced crane lifting capabilities and offline stand-building. The recent refurbishments of two units of our fleet have improved their operating performance and competitiveness.

ESTABLISHED MANAGEMENT TEAM AND STRONG OPERATORSHIP
We are a seasoned and highly experienced management team with years of combined tenure in the offshore oilfield services industry. Our team has substantial experience in all oil & gas industry disciplines including building, marketing and operating all types of mobile offshore drilling units.

INTERNATIONAL LOCATIONS

We currently operate tender rigs offshore in Malaysia and have undertaken shipyard projects in Malaysia, Thailand, Ghana and South Africa. We have offices in Singapore, Malaysia, and Thailand.
